Electric Fireplaces Just Entered a New Category

See-through fireplaces have always been one of the most desired architectural elements in luxury design. Nova™ Clear creates a true visual connection between rooms while adding the movement, warmth, and atmosphere from both sides. It creates a new way to use fireplaces in open spaces. The result is not another electric fireplace; it is a new architectural feature built for open-concept luxury living.

After years of development, Nova Clear combines innovative laser projection and patented transparent optical film to create a clear, two-sided visual experience never seen before.

Why Nova™ Clear?

A True See-Through Electric Fireplace

More than 80% transparency preserves the visual connection between spaces while delivering ultra-realistic flame imagery from both sides.

Patented Transparent Display Technology

Advanced laser projection and transparent optical film work together to display multidimensional flames and high-resolution media while maintaining an open, connected view between spaces.

Entertainment, Re-imagined

When not in use as a fireplace, Nova Clear transforms into a transparent media display for streaming, movies, gaming, or ambient visuals from a compatible streaming device.

A Complete Premium Experience

Multi-dimensional flames, premium lit logs, Dolby® Audio, flexible installation options, and intelligent controls bring the experience together.

Smart Dual-Zone Heating

Heat two spaces together or independently with efficient comfort exactly where it's needed.

Smart Control

Create the perfect atmosphere with the included remote, touch controls, Modern Flames app, or compatible smart-home integration.

The Technology Behind the Transparency

At the heart of Nova™ Clear is a patented, ultra-thin transparent optical film engineered to work with advanced laser projection.

The film captures vivid flame imagery and high-resolution media while maintaining more than 80% transparency through the fireplace. Flames and entertainment remain visible from both sides without eliminating the connection between spaces.

The result is not simply a transparent fireplace. It is a transparent display experience built into a premium architectural hearth.

Multi-Dimensional Flames. Natural Movement. Remarkable Depth.

Nova™ Clear introduces the next generation of Modern Flames' virtual flame technology, delivering multi-dimensional flames with natural movement and remarkable depth from both viewing sides. Choose from three flame styles and multiple color settings to create an atmosphere ranging from the warmth of a traditional hearth to a distinctly contemporary look.

Authentic from Every Angle

The Nova™ Clear log set is crafted from real split wood, bringing natural texture, depth, and character to life from both viewing sides.

Illuminated logs, an active ember bed, and adjustable downlighting work together to bring to life the warmth, variation, and visual detail expected from a premium electric fireplace.

Illuminated Lifelike Logs

Crafted from real split wood to bring authentic texture, natural detail, and traditional hearth character to the fireplace.

Active Ember Bed

Dynamic color and glowing ember effects beneath the logs create added depth, warmth, and movement.

Integrated Downlighting

Adjustable downlighting highlights the ember bed and helps define the mood of the room, from subtle ambiance to a more dramatic presentation.

More Than a Fireplace

Dolby® Audio

Integrated Dolby Audio delivers sound quality designed to match the high-resolution visual experience. Choose from Normal, Starry Night, or Stormy Night fire sound modes, connect via Bluetooth to stream music, or enjoy immersive audio while watching your favorite media.

Smart Heating

Advanced PTC ceramic heating delivers fast, consistent warmth with quiet operation, allowing Nova Clear to heat both sides of the fireplace or focus comfort on one room. Energy use is optimized to maintain steady heat for a more efficient, comfortable experience.

Entertainment-Ready Display

Connect a compatible streaming device to watch television, movies, sports, gaming, digital art, or ambient visuals through the transparent display. Content remains visible from both sides while preserving the openness that defines Nova Clear.

Smart Control Made Simple

Complete Control, Your Way

Take complete control of your Nova™ Clear fireplace with the Modern Flames app, included remote, or integrated touch controls. Easily adjust flame style, flame color, ember bed lighting, downlighting, heat output, timer, sound, and media mode to create the perfect atmosphere from either side of the fireplace.

Modern Flames App

From any iOS or Android device, the Modern Flame+ app puts fireplace customization at your fingertips. Fine-tune the look, warmth, lighting, and convenience features with intuitive app-based controls, or integrate Nova Clear with a compatible smart home system for effortless voice and app control.

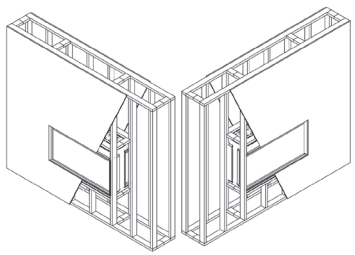
Included Remote Control

The included remote provides fast, tactile control for everyday adjustments, including flame, lighting, heat, sound, timer, and media functions. It also activates the on-screen menu for deeper personalization and quick access to favorite settings.

Flexible Installation Options

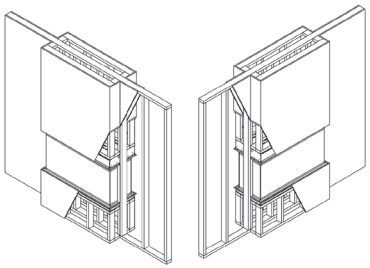
Nova™ Clear is an architectural platform, not a single installation style. Its transparent design can connect rooms, preserve sightlines, and create a focal point in applications that were previously unavailable in electric.

Clean Face Installation



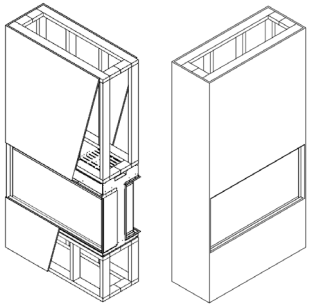
A streamlined built-in design that delivers a clean, modern fireplace appearance for feature walls and one-direction viewing.

Bay Installation



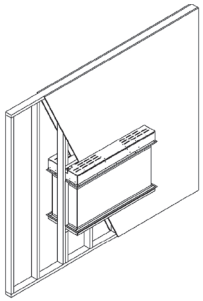
A dimensional installation that showcases the fire from the front and sides, adding depth, visibility, and visual interest to the room.

Island Installation



A shared flame experience designed to connect two spaces while preserving sightlines, openness, and architectural flow.

Floating Installation



A refined architectural approach for projects that call for visual lightness, modern flexibility, and a fireplace that feels seamlessly integrated into the space.
